

ZR24/7 Hazer

The ZR24/7 Hazer is capable of producing very small refractive airborne particles to deliver the perfect light-enhancing canvas of haze. The rugged design together with a long list of features makes this, the world's best hazer from JEM!

The basis of this unit is a rugged design suited for any event, but targeted at professional applications from stage to touring as well as high scale discotheques.

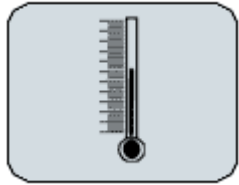

The 3-digit LED user interface gives you access to:

- DMX set up – DMX addressing
- Fog out put – from 1 to 20
- Fan speed – from 1 to 20
- Temperature control – Setting the temperature to “high”, “normal” or “low”, enables you to use different JEM fluids for different effects.
- Timer – high precision digital timer selecting timer “ON” or “OFF” for X-amount of seconds.

- 3-digit LED user interface
- This Hazer comes as standard with on-board 3- and 5-pin DMX – two channels (Fan speed and Fog output).
- V.G.A system (Variable Geometry Airflow) allows you to set the angle of the output.
- High velocity radial blower.
- This high precision hazer uses state-of-the-art digital technology.
- Specially designed heat exchanger has reduced heat up time to less than 2 minutes.
- Designed for continuous operation.
- Fluid consumption at max output: 410 ml/hour

EFFECTOLOGY:

■ **DIRECT THERMAL PROTECTION
DEVICE (DTPD)**

- This small yet crucial component is the last line of defense against catastrophic failure. Other manufacturers still depend on cheap plastic whereas Jem's DTPD is made from a solid ceramic composite. This guarantees extremely precise overheat monitoring and is unaffected by ambient temperature changes.
